TESTIMONIALS

"For the Freight Forwarders Association of Romania - USER, this year's edition of TransLogistica Romania was a success, considering the very large number of participants who visited our stand, but also the connections and partnerships we established in after the fair. It was an honor that we were named strategic partners of an event of such magnitude, which brought together the most important players in the field of transport and logistics, but also the opportunity to organize a conference room, discussing topics of great interest. Considering this year's success, we are convinced that the 2024 edition of the exhibition will exceed all expectations."

Diana Ionescu, Marketing manager USER

"The Translogistica exhibition was both informative and an example of high-quality services and impeccable organization. It was easy to see the commitment and professionalism of the organizing team who did everything possible to make the event run smoothly. A unique opportunity to see how the rail and logistics industry is adapting to the increasingly complex demands of the global market, with a particular focus on sustainability and efficiency.

The exhibition was also an ideal venue for networking between professionals from various related sectors.

We look forward to returning and continuing this journey of rail and logistics development."

TESTIMONIALS

"The second edition was one that completely exceeded our expectations, a much larger number of exhibitors compared to 2022. We were happy to be part of this concept brought by TransLogistica!"

Tiberiu Hobay, Supervisor Business Operations Cluj Office, Heisterkamp

"This edition of TransLogistica 2023 brought together a large number of industry professionals, created the environment for establishing useful contacts, partnerships or future collaborations. Seminars and debates on current industry topics provided a deeper insight into the key issues and directions in which logistics and freight transport are heading. For VTG Translogistica 2023 was a good opportunity to discuss, especially in the context of European environmental policies, about our innovative R2L and Powerbox solutions. These solutions allow the transport of "noncranable" car semi-trailers by rail, even for refrigerated car semi-trailers, thus opening the way for an efficient logistics between the road and the railway. In conclusion, such events can provide a valuable perspective on the evolution of this vital sector of the economy."
